TITLE : MAIN ROPE INSPECTION DEVICE FOR
ELEVATOR

ABSTRACT : PROBLEM TO BE SOLVED: To provide a main rope inspection device for an elevator with simple construction permitting easy detection of a broken strand of a rope.

SOLUTION: An main rope inspection device for an elevator for detecting a broken strand 6a of a main rope 6 for the elevator comprises an approximately U-shaped frame 1 and a string 3 set on the frame 1 with given tension. The string 3 is put in contact with the main rope 6 and then the elevator is moved in detecting the broken strand of the main rope 6 with the vibration of the string 3.
